

Theology I.

Being of God.

Due Feb. 9th 1903

Earl C. Davis.

Review of Lectures in Theology I.

The study of theology centers about the problem of the Being of God, in the attempt to reach a satisfactory conclusion of the problem, we turn first to the solution offered by materialist, who holds that the apparent dualism of mind and matter is in fact a monism of matter. Mental activities are simply products of matter. We find in the solution as presented by the materialist rather doubtful arguments, and finally as is seen in Haeckel an admission of failure in solving the ultimate problem.

But in addition to these weaknesses in the system, we find that it does not cover all the

facts of life. There is no place in the materialistic philosophy for ideals. "All mental activities are the product of experience" says the materialist, but ideals transcend experience. Analysis of ideals indicates clearly that they rest upon the fact of a demand for unity in our natures. This demand for unity is seen by an analysis of our sense of True, Goodness and Beauty, e.g. our conception of a beautiful object is found to consist in a demand for an organic relation of the parts to the whole. Each part contributes its share element to the whole. Because we do not find provision for all the facts of life, we turn from the materialistic solution, as being inadequate, and seek solution in another direction.

and "values"

3

rig.-the system of postulates. This system is used not because it will lead to an absolute proof, but, because, upon the basis of the postulate, a rational and acceptable conclusion is reached which is inclusive and comprehensive.

1st Postulate of Leibniz = truth.

The first question that arises in our minds is, "Is thought real?" We find two answers. It is real in the sense that "I think." But when we recall that thought is mainly concerned with interpreting external phenomena which presented to us through the senses, the question is suggested "Is there anything outside of our selves to which thought corresponds?" Is there an outer thought to which the inner corresponds? Unless an assumption is made that there is

an outer thought, to which the inner corresponds, the value of the power of reasoning, and all that goes with it rests upon rather unstable grounds. For, if adjustment to environment is the function of mental activities, then the greatest flexibility in thought is demanded. But reasoning limits flexibility in thought. It is sub servient to laws of thought. Hence reasoning relands the adjustment to environment and is a positive hinderance, unless it is assumed that there is an outer thought to which the inner thought corresponds. Hence our first postulate is that of universal intelligence. A study of Augustines "Freedom of the Will" and Ryces "Religious Aspect of Philosophy" confirms the postulate.

In each case the argument rests in fact upon the basis of one postulate. While their arguments are not positive proof they do confirm the postulate. Also upon the basis of the postulate of universal intelligence, the problems of identity, of and of relation become of rational significance, and are a strong confirmation of the validity of the postulate. While such tests do not raise the postulate to the plane of proof, they do confirm its validity, and warrant us in continuing upon the assumption of a universal intelligence.

2nd Postulate of Goodness.

Activity. With our demand for unity in a world of universal intelligence, we are faced with

the problem "to do" or "not to do", a life of greatest activity or the least. Between these two we must choose. (Browning's *Checker Board*). While we may not have the knowledge in full upon which to base a fully intellectual decision, we are warranted in making a decision in faith, in putting ourselves upon the side which we believe offers the largest scope to life. (Jones' *Need to Believe*) In view of the importance of activity in life (Fichte "The Vocation of Man"), the fact that it gives the widest scope to our intelligence, we are justified in making a provisional postulate of activity, which includes our first postulate. We now have a postulate of Universal Intelligence with an impulse to act.

But activity must be towards an end. It perishes a purpose. Now we find in ourselves what may be called a social impulse, the tendency to act contrary to the desire of mere individual safety. (Kant). Hence we postulate the moral ideal, i.e. the existence of moral order in the world. But we have already seen that our universal intelligence is active, and now we add that the activity is in the direction of the moral ideal, or the Kingdom of God. Hence we postulate an intelligent goodwill. We find our intelligent goodness postulate is confirmed, when in its light we seek an explanation of Moral Law. It explains the relation of social impulse to moral law. Also it gives

a clear significance to Conscience, both as to its origin and volatility. For Conscience is the universal moral order expressing itself in the individual. Again in light of our postulate moral idealism is justified. Ideals represent the universal good-will expressed in individuals. It explains the origin and volatility of moral ideals. All these approvals are not proofs but only confirmation. Our postulate becomes the comprehensive intelligent Good will shaping the Kingdom of God."

3- Postulate of Feeling; = Beauty.

In the realm of feeling we find that we have a sense of beauty in our nature which is delight in the disinterested natures of life,

a sense of satisfaction in seeing organic unity. Now this sense of beauty is of value beyond one sense, because it is matched by the joy of the Good will in experiencing unity in his own mind. Upon the basis of the postulate our sense of beauty comes to true worth and dignity. Moments of great artistic insight, of moral as well as well as aesthetic gain gain greater authority, because they are moments when we discern the true unity of the whole Ideal.

We have found that if we postulate an intelligent Good will that we can account for the joys of life, which otherwise have little meaning. We know for certain that the postulate has

Kant's argument is that existence
adds nothing to the idea.

confirmed by the satisfactory use made of it.

III. Confirmation of the Postulate

This same conclusion has been reached by other methods, so called methods of proof. We now turn to investigate these arguments to determine how far they are proofs and what relation they bear to our postulate. A study of the *a priori* argument as presented by Husserl shows that his argument is not a proof. To his position that the idea of the Highest Thinkable proves the existence of the Highest Thinkable, Kant would reply that mental phenomena are entirely distinct from "things in themselves" and the idea of a thing has nothing

to do with its existence. This off his
two ideas of God as well as things. Now
Kant did not raise this question,
but relied upon the volatility of the
mind, or in other words he tacitly
assumed one postulate. Again
Ausebeus' Highest Thinkable is an inclusive
whole. It cannot be the idea at end
of the series, because that final idea
flourishes the preceding ideas of the series
would be greater than the five
ideas, hence it is an inclusive
whole. Also, while Descotes' 1st
argument is similar to Ausebeus', his
last argument turns on the necessity
of explaining the existence of ideas
in our minds. He argues towards
what must be back of the ideas, a
tendency towards a postulate.
How our postulate explains the

existence of the ideals in the mind, and is confirmed by Descartes argument. The a priori arguments do not prove the existence of God, but they confirm our postulate.

Cosmological Argument.

In the causal arguments there are three steps. The first is from cause to cause, i.e. book of all phenomena - there must be an uncaused cause. In observing the sequence of phenomena, we detect two elements, 1. force & event. Following back the line of force we come to an uncaused force, which so far as it goes confirms our postulate. Book of the line of events we find a unitary General Phenomena (Bosch interaction) This confirms the postulate.

Now we can find positive proof in the argument from mind to mind, but it also confirms the postulate. But in interpreting the first cause or will we are lead to interpret will as strength of Personality (not a choice between Alternatives two choices). Now we found ~~that~~ our idea of P. to be unity, and also Personality, a unity of force with purpose. This corresponds to our postulate, and is a confirmation, i.e. God is not the conclusion but the pre-supposition of the causal argument.

Teleological Argument.

In the 1st form of this argument from design to designer, we do not prove proof. While design points to a

designer, it does not prove a first cause, (Kant) It proves intelligence, but not infinite intelligence (Powers). The forces of the world too seem a progress, as seen in our conceptions of Truth, Goodness and Beauty. We can account for this progress either by chance or by Teleology. No logical reasoning can make the decision, but chance seems impossible, while upon the basis of our postulate teleology seems rational, and the observed facts of life prove to be just what would be expected upon that supposition. The facts strengthen and confirm our postulate.

There is however one serious objection to this, viz. accounting for evil in the world. To

satisfactory explanation has thus far been given, nevertheless we cannot discard our postulate on the strength of this objection alone, because we cannot for final judgment upon any question until the facts are all in. In this case the facts are not all in. Again the mere fact that the problem arises in our mind is a confirmation of our postulate, for the problem has no meaning except upon the basis of the postulate. So in spite of the problem of evil we still hold to the postulate.

Conclusions.

Having made a postulate of an intelligent Good will, we have seen it confirmed by all

the facts of life, by the historical arguments for the Being of God, and by scientific theories. It makes life rational and real. Our postulate is so strongly confirmed, and adds so much to the significance of life, its far wide life so great in the fact, that we are justified in accepting as truth that which we have hitherto held to be only a postulate.

Criticism.

To be plain spoken I have no criticism to offer. In idea, mechanism, and presentation, the problem of the Being of God has been set forth in a manner

which meets the demands of my habit of mind. I do not believe that there is any other soliloquizing method except that of the Postscript, at least I have failed to find one.

While the mechanism has been satisfactory to me, and I think that I have understood the main principle of the course, I think that it might be improved here. After I have heard the criticism "I don't see what he was driving at." I think that the soberies lies in the more detailed system of lettering and numbering the divisions and sub-divisions. At times I have been unable to follow just this outline which is rather essential to a clear

comprehension of the subject.

Thank you for the suggestion —
an effort to state both sides fairly often results in
confusion.

The summary lacks clearness here and
there perhaps because of its great condensation.
