

The Hope For a New Age.

Thanksgiving expressed in terms of
Hope.

Electro-Motive Force

Water Power.

Wentworth of a stream.

Force in human nature.

Inclination.

Serial.

Historical form of expressing this great
serial Hope.

a = Superficial Interventions.

b = Natural and inevitable revolutions.

c = Spontaneous development.
19th Century Latin way

Knowledge is knowing = Matter in darkness
or light; depends upon. =

a = The cleanness with which we see
the forces.

b = The unswerving singleness of
purpose with which we
co-operate to direct the forces
towards a great new age.

circumstances are, the work over

The Hope For a New Age,

The Hope for a New Age is
a common characteristic of our
kind. =

~~It is~~ It is an expression
of the electric-volting force of
mankind = its momentum. = The
tremendous forces with which
the human race hauls itself
forward,

The formulation of this impulse,
the creative impulse of war, has
left its record in the thought
of war, as well as in its
changing history.

Some have expected the new Age for which they hoped to come as a gift from God. They have been so fersimilita that they have seen no possibility whatever of any good ~~good~~ coming out of the world as they saw, clearly if anything happened it must be from God. - it must be supernatural. =

2 - Some have believed that the new hope will be realized by some process of spontaneous combustion. Like Micawber in Dickens's Tale, they are waiting for some thing

"Hope for the New Age."

The power of the known ^{to hope} is one of the most striking facts in life. We measure an electric current by its electro-motive force, - i.e. the power to overcome resistance! We measure the strength of a current of water in terms of horse power, and its ability to overcome resistance. Any working body acquires momentum, measured by the relation of its weight to its velocity.

We find this same kind of a tendency to hurl ourselves forward into the tomorrow, - into that strange and alluring world of possibility, that is forever baffling us, and yet forever luring us on.

This momentum of our lives in what determines our vital energy, our electro-motive force, our horse power =. It is a quite wonderful

and sometimes quite a terrible thing to contemplate. Under ordinary circumstances it flows on quite unrecognized, - we perform our daily tasks, - sometimes encountering an enormous amount of resistance, and find our selves flung in through obstacles that seemed insurmountable. Sometimes we get into places where the resistance is unusually high, - our very life is endangered, - and then ~~the worst~~ ~~thing~~ ~~is~~ ~~the~~ ~~interesting~~ thing happens. A little gland tucked away in the flesh near the kidneys begins to throw into the entire system a liquid, that transforms us into supermen immediately. The worst defeats our circumstances are, the worst our

life boards,
